

The Energy Smart Unit™ reduces, reuses, and recycles wasted electricity. Your electric provider charges for all the electricity that goes into your home or business. Start using what you are already paying for, instead of throwing it away.

The US Government is now Eco-friendly. You may qualify for a \$1500 federal tax credit. Find out how on our website.

Residential Price _____
 Commercial Price _____

The US Dept. of Energy says we are billed for \$16 Billion in wasted electricity. Claim your share TODAY!

Stabilize the power in your home in order to avoid power surges, brown outs, and damage to electrical appliances, equipment and components.

The Energy Smart Unit™ acts as a surge protector for your entire home or business, preventing costly damage from the surges caused by lightning strikes.

The Energy Smart Unit™ optimizes electrical power coming into your home, allowing your appliance and equipment motors to operate more efficiently, saving you electricity.

By capturing the excess power delivered by your utility company the Energy Smart Unit™ reduces the heat and strain placed on electrical lines and components.

The Energy Smart Unit™ Residential Unit works on any single phase up to 200 amp circuit panel. One unit is typically all you need for most single family homes. The Commercial Unit works on any 3-phase up to 400 amp panel. One unit is typically all that is needed per location. Some instances will require more units.
